Rees Scientific TEXT Notification Set-up

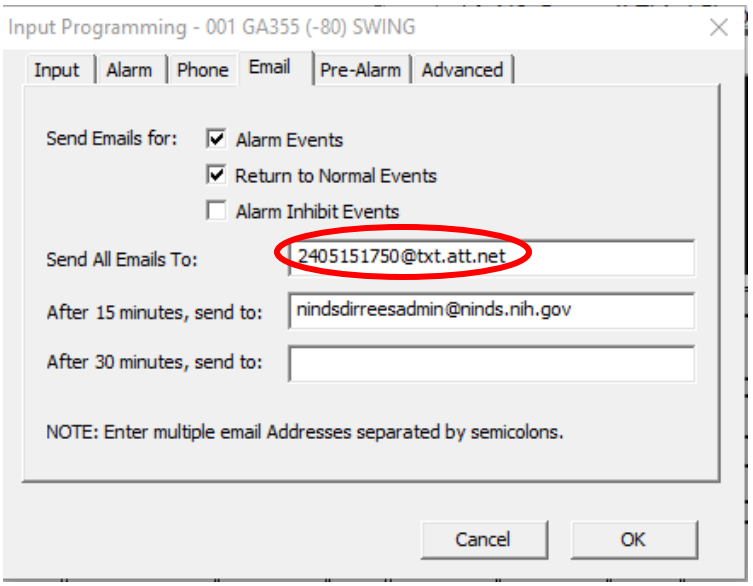

To allow the system to send text notifications, follow these steps.
*The system is actually sending an email to text message.

1) Determine the corresponding email address suffix based on the service provider for the phone number you want to have text notifications sent to.
    a. These are some of the most common email addresses.
        i. AT&T - **@txt.att.net**
        ii. Verizon - **@vtext.com**
        iii. T-mobile - **@tmomail.net**

2) Go into the input 'Program' and [click] on the 'Email' tab. (selected alerts are based individual preferences)

3) Within any of the three email fields (based on individual preference) enter the mobile phone number followed by the appropriate email address suffix. (Example for AT&T, **2405151750@txt.att.net**)
    a. Don't include dashes or spaces in between the numbers.

[Click] 'OK' to save changes.
